

## Undergraduate & Graduate Research Positions in Cold Regions Hydrology, Wilfrid Laurier University:

The *Dehcho Collaborative on Permafrost (DCoP)* is looking for undergraduate and graduate students to examine the impacts of permafrost thaw and/or wildfire on the hydrology of peatland-dominated basins in the southern Taiga Plains ecoregion, Northwest Territories, Canada.

*DCoP* is a fusion of leading-edge scientific and Indigenous knowledge on permafrost focussed on developing new methods and predictive tools to help manage permafrost and adapt to permafrost thaw. See a short video on *DCoP*: <https://youtu.be/Niy7R0sXeZg>.

Field studies will be based at the newly renovated Scotty Creek Research Station (<http://www.scottycreek.com/>). The Łı́ıdlıı Kúę First Nation recently took on the leadership of the station making Scotty Creek one of the first Indigenous-led research stations in the world and a "flagship" for scientific-Indigenous collaboration in Canada's North (<https://www.youtube.com/watch?v=FOWtxuasH7c>).

For more information, please contact William Quinton: [wquinton@wlu.ca](mailto:wquinton@wlu.ca), 519-635-0210.
